

PHP vs Javascript

Which sucks harder?

Rules

- Referee: **The Suckometer™** (written in Perl)
- 60 seconds per topic
- Topics
 - Syntax, Data Types, Scope, Name spaces and Packaging, Standard Library, Extensions Libraries
 - Procedural, Object Oriented, Functional and Meta Programming, AOP
 - Networking, Error Handling, Multi Tasking, Reflection, Garbage Collection, Security, Tools
 - Server Side, Client Side, Community, Documentation

Syntax

- Easy – the best of your favourite languages!
 - “JavaScript borrows most of its syntax from Java, but also inherits from Awk and Perl, with some indirect influence from Self in its object prototype system.” - Brendan Eich
- Sexy one-liners
 - `$("p.surprise").addClass("ohmy").show("slow");`
- Narcissus – Javascript Self Interpreter
 - it could almost be Lisp!

Core Data Types

- Strings with Unicode support(!)
- Objects are everywhere
 - `(102).toColorPart();` // prototype
- Easy type conversion
 - `+` operator overloaded, `parseInt()`, `parseFloat()`
- Simple Collections
 - Arrays for stacks, queues etc.
 - Who needs hashes? In Javascript: Objects
- Literal arrays / objects easy to generate
 - e.g. JSON – it's the new XML!

Scope / Name spacing / Packaging

- Lexical scoping rules simple and easy to remember:
 - If it ain't local... it's global
- Functions as name spaces – highly flexible!
- Dynamic package loading on Internet scale!
 - The library is everywhere:
 - Adsense
 - Maps
 - Tracking users

Standard Library

- All the basics you need
 - RegExp, Math, Date
- Browser APIs
 - The joy of DOM (OK: `jquery`)
 - XMLHttpRequest - the worlds most exciting API!
- And lots more...
 - J2SE (via `Rhino`)
 - .NET (via `JScript.NET`)
 - `XPCOM` (e.g. Firefox extensions)
 - `wxJS` (Javascript on `wxWidgets`)

Extension Libraries

- prototype – the hottest library ever...
- ...apart from jquery, which is hotter
- JSAN <http://www.openjsan.org/>
 - CPAN for Javascript
- Mozilla dying to blow our minds
 - E.g. E4X - <http://en.wikipedia.org/wiki/E4X>
 - Canvas
 - Etc.
- Lots more cool stuff at <http://www.mozdev.org>

Procedural Programming

- All the control statements you know and love
 - if, else, for, while, do...while, switch
- Scales down
 - Remember “DHTML for Dummies”?

Object Oriented Programming

- (Almost) everything is an object
- Implicit this variable makes Java programmers feel right at home!
- Prototype based inheritance radically reduces lines of code
 - No need for inherits!
- Easy mix-ins at runtime
 - add behaviour to prototypes
 - add behaviour to objects

Functional Programming

- Functions are objects too!
- Functional programming blows your mind!
 - ...and shrinks your codebase!
- Closures, monads, currying
- Continuations
 - via jwacs: <http://chumsley.org/jwacs/>

Meta Programming

- `Object.prototype !`

- `# Dynamic cow...`

```
var cow = new Object();
```

```
Object.prototype.moo = function() {  
    alert( 'Mooooooooo!' );  
}
```

```
cow.moo(); # Oh Yes!
```

Aspect-Oriented Programming

- No need for ugly byte code hacks!
- Easy to roll your own
<http://www.jadetower.org/muses/archives/000391.html>
- Or find library e.g. `dojo.event.connect()`
- And CSS selectors == dependency injection!!!
 - <http://softwareas.com/css-the-tech-ajax-forgot>

Networking

- XMLHttpRequest (AJAX)
 - When was the last time a network client API caused this much excitement?
- Via flash proxy to anywhere
- Otherwise take your pick of networking from;
 - Java (via Rhino)
 - .NET (via JScript.NET)
 - XPCOM
 - wxWidgets

Error Handling

- Exceptions, just like Java
- Including `finally`!

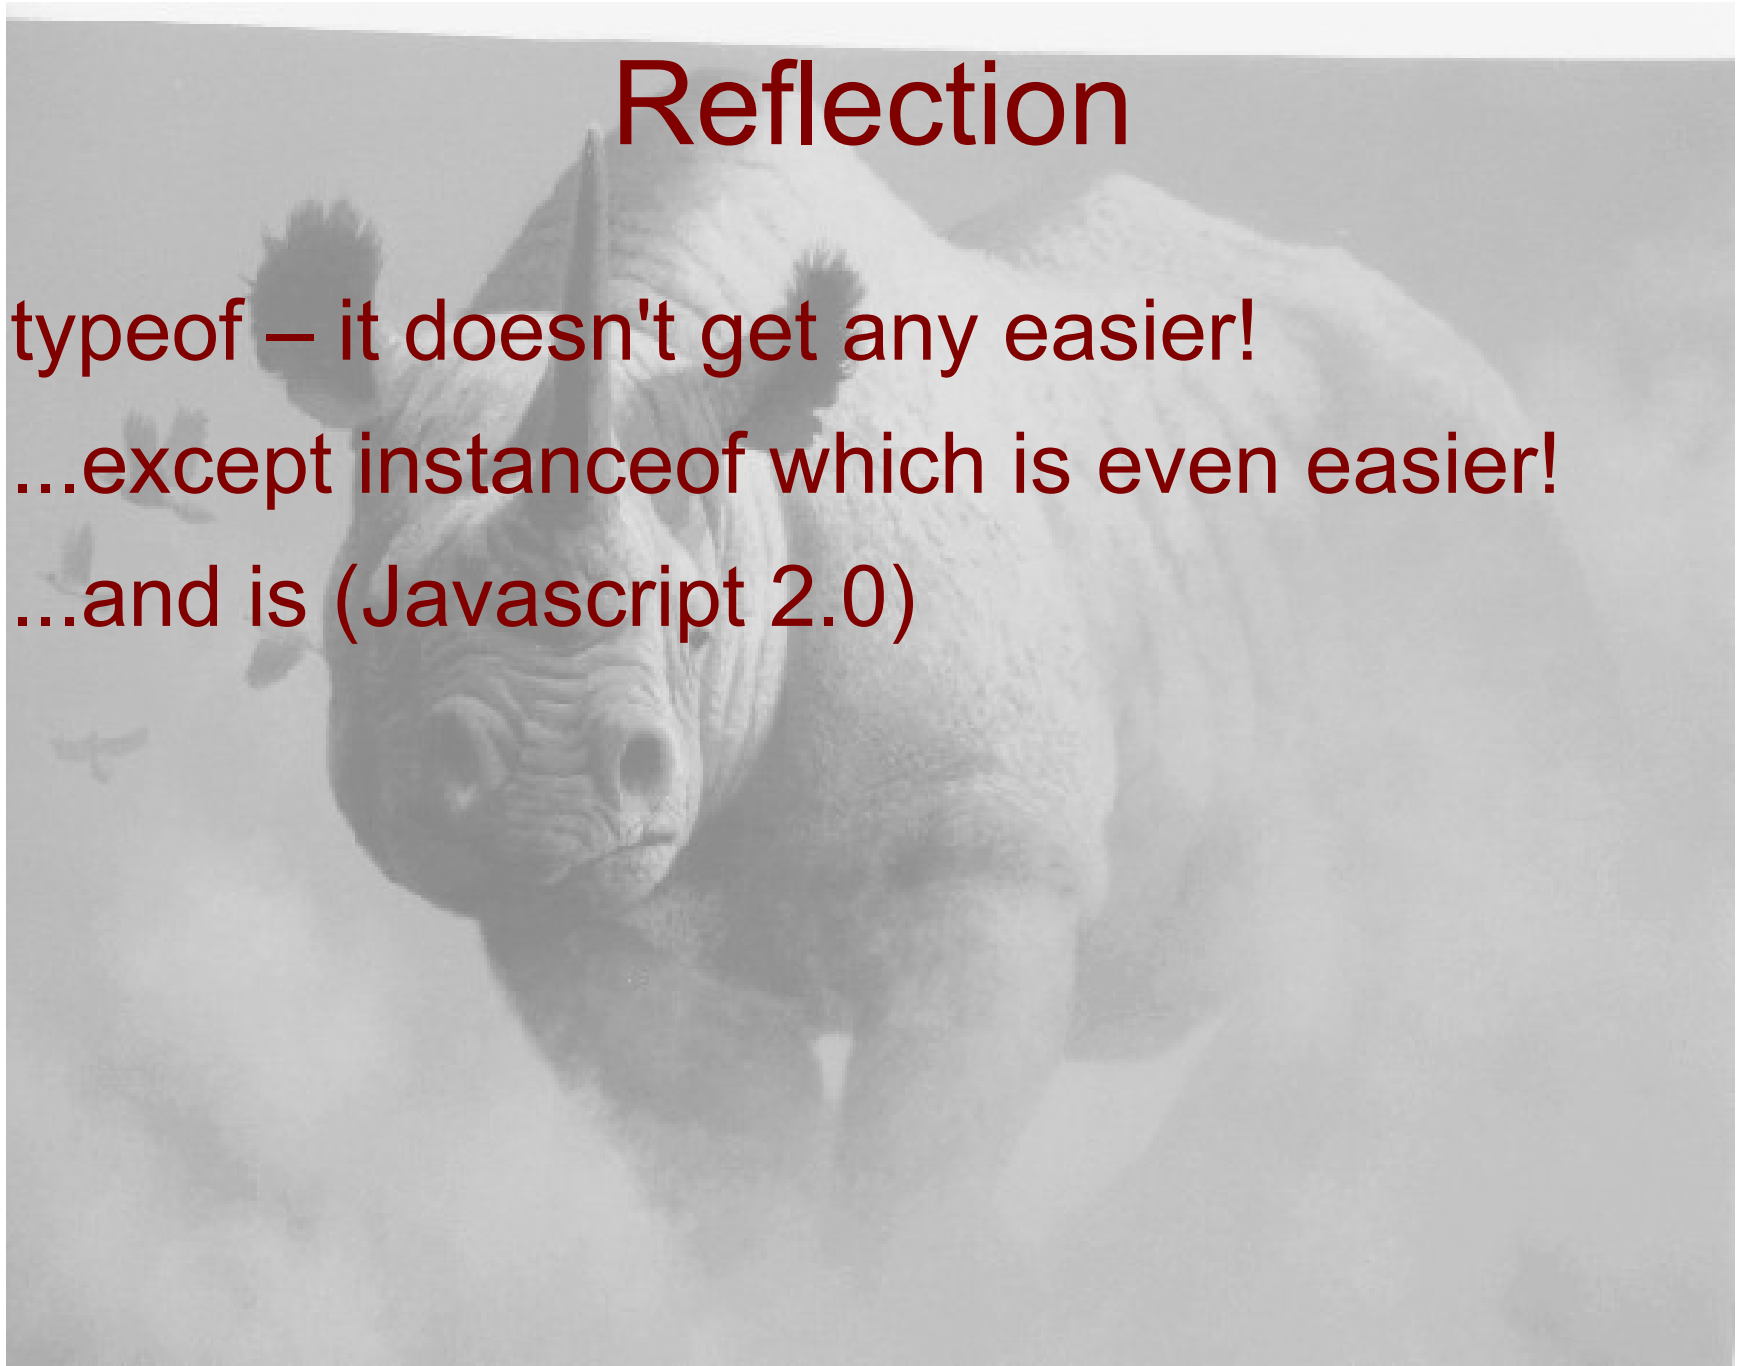

Multi Tasking

- Asynchronous XMLHttpRequest
- setTimeout() is so easy!
- Co-routines
 - Via jwacs: <http://chumsley.org/jwacs/>
- Iframes

Reflection

- typeof – it doesn't get any easier!
- ...except instanceof which is even easier!
- ...and is (Javascript 2.0)

Garbage Collection

- Different implementations: easy to understand
 - Most: reference counting
 - Spidermonkey: mark and sweep
- Great tools
 - Leak Monitor
 - IE Leak Detector

Security

- No files, no problem!
 - Browsers keep all Javascript tightly locked down

Tools

- They get better every day!
 - Selenium : *the* web app tester
 - Firebug
 - Visual Studio Debugger
 - JSEclipse

Server Side

- <http://haxe.org/>
- http://users.skynet.be/saw/wxJS/mod_wxjs/
- Javascript Servlets
- **IIS: JScript + ASP.NET / ASP 3.0**
- **More:** http://en.wikipedia.org/wiki/Server-side_JavaScript

Client Side

- Your browser! AJAX! Revolution.
- Mozilla
 - Firefox extensions
 - Xulrunner
- wxJS!

Final Rave

- Steve Yegge (ex-Amazon, now Google)

<http://steve-yegge.blogspot.com/2006/09/bloggers-block-3-dreaming-in-browser.html>

“JavaScript is probably the most important language in the world today.”

- Are you still stuck on the server-side?
